

Bome's Restorator

Tutorial: Searching Resources (e.g. animations)

Note: the screenshots in this tutorial originate from an older version of Restorator.

1 Overview

You probably know some animations of Windows, for example the flying files when you copy files. These animations are stored as avi videos in the resources. This example explains how to find files that contain avi files.

To open the find resources dialog, use the find tool button \bigcirc .

Bome's Restorator: Tutorial: Searching Resources 2 Set the search criteria

2 Set the search criteria

You have several options to specify the type of resource you want to find.

"All Types", wouldn't limit your search results to a specific resource type.

When you check "Windows standard resource", you can choose a Windows defined type that you want to look for. Alternatively, you can search for a specific type of data (AVI clip, Sounds, images, etc.) that Restorator recognizes automatically. Finally you can search for a specific name of a resource type.

The field "Resource Name" allows to search for a specific resource name, e.g. "1474" for finding a resource you know already.

In the "Containing Text" field you can enter a text which will be searched in the resources of the files.

In the File Type field you can limit your search to specific file types.

The "Search in" sets the folder where to search for files. You can choose that with the Browse button. When you check "Include Subfolders", all subfolders of the folder are searched, too.

All criteria that you enter in the appropriate fields have to be fulfilled for a file in order to be found.

Find in Files			X	
Search Criteria C All Types C Windows standard reso Acceler	rators		Find Now New Search	
Recognized resource o AVI vid	eo clip	•		
C Resource type by name	3:	•		
Resource Name:				rial, we search mation". It is not
Containing Text:		T		y Windows, so
File Type: All files	containing resources (*.acm;*.ax			rator detect it. ow I specified
Search in: C:\	ide Subfolders Brown	- my		r AVI clips.
No files were found (of 51).	ade subrolders Brow:	se		

Bome's Restorator: Tutorial: Searching Resources 2 Set the search criteria

Press the Browse button to select the folder of the installation of Windows (of course you can search wherever you want, for example the complete C:\partition).

Find in Files		×
Search Criteria C All Types C Windows standard resource typ	ie:	Find now New Search
Accelerators		Close
Browse For Folder ? Please select the start directory for the search. Image: Desktop Image: Desktop	esources (*. acm;*.ax;*.t v ers Browse	

3 Search !

Finally press the "Find now" button and watch in Restorator's Resource Tree the files appearing.

On the right side you see the familiar animation of the papers flying that you see whenever you copy files .

🌇 Restorator 2004 - C:\Wiels Thorwirth/Local Settings\Temp\DXF\DXSDK\Redist\DirectX81\set 🔳 🗖 🔀

setupapi.dll AVI AVI Bitmap Dialog String Message Table Icon Setupapi.dll setupapi.dll setupapi.dll						
AVI\30\English (United States)	AVI video clip	4 open files				

So you see that the find dialog is a powerful way to find any type of resources.

When you leave all fields blank and set the type to "All types", you will find all files (32bit) that have any resources at all...quite a lot...
